

November 27th, 2018

To the Laramie County Commissioners,

We were glad to hear that from now on any new shooting range will be designed by a certified engineer who is familiar with that. However that does not change the one already being used out here in the eastern part of the County which has numerous problems. In particular the corn stalk bales that are supposed to stop the bullets from going onto the land next to it are piercing one of the tanks at the oil well.

I'm asking you to seriously consider the tragedy that could happen and that you have the ability to stop it from happening.

All the folks out here should have the protection of the constitution and be able to live without this fear that hangs around this community.

Thank you very much

Mary K. Roma

Brad/Brian,

Can you please include my e-mail below as part of the LCLUR package?

Thanks,
Lori

The safety of Laramie County Residents is at risk without shooting range regulations. The Laramie County Land Use Regulations need to add in requirements that all public, commercial ranges or ranges operated by the government or private entity be required to be certified by a professional shooting range designer who is approved by the National Rifle Association and the National Shooting Sports Foundation. The certification of the range must be provided to the county for verification. The range must also be inspected every year to verify range is maintaining safety design requirements. These ranges must be required to hold an insurance policy in the case of any bodily injury or property damage incurred as a result of the shooting range.

Without shooting range safety requirements, shooting ranges will be popping up all over the county since they will see how they can get away with anything and without safety standards people's lives are in danger. Therefore safety standards must be required.

Sincerely,
Lori Sandberg
